1 Supported FEM file formats

Not all functionality defined for the exchange file formats is supported. The supported subset is currently mainly defined by the functionality supported in GLFrame rspt. the BMF file format.

More detailed information on supported functionality can be found in the according directories in the docs subdirectory.

1.1 NASTRAN Bulk Data Format (BDF)

1.1.1 BDF Cards supported

1.1.1.1 Bulk Data

| | Name | Description | Read | Write |
|---------|------------|---|------|-------|
| General | | | | |
| | MAT1 | Material definition | ✓ | ✓ |
| | MAT2 | Shell Element Anisotropic Material Property Definition | ✓ | ✓ |
| | GRID | Grid nodes | ✓ | ✓ |
| Element | S | | | |
| | CTRIA3 | 3 node shaped shell elements | ✓ | ✓ |
| | CQUAD4 | 4 node shaped shell elements | ✓ | ✓ |
| | CBEAM | Complex beams ¹ | ✓ | ✓ |
| | CBAR | Simple beams | ✓ | ✓ |
| | CROD | Trusses | ✓ | ✓ |
| | CELAS1 | Scalar Spring Connection | X | X |
| Element | properties | | | |
| | PSHELL | Properties for CTRIA3, and CQUAD4 | ✓ | ✓ |
| | PBEAM | Integral properties for CBEAM | ✓ | ✓ |
| | PBEAML | Properties for CBEAM describing cross section | ✓ | ✓ |
| | PBAR | Integral properties for CBAR | ✓ | ✓ |
| | PBARL | Properties for CBAR describing cross section | / | ✓ |
| | PROD | Properties for CROD | 1 | X |
| | PELAS | Properties for CELAS* | X | X |
| Load | | • | | |
| | LOAD | Load case combination | 1 | ✓ |
| | FORCE | Forces on Nodes | ✓ | ✓ |
| | MOMENT | Moments on Nodes | ✓ | ✓ |
| | CMASS2 | Scalar Mass Property and Connection | ✓ | ✓ |
| | CMASS4 | Scalar Mass Property and Connection to Scalar Points Only | / | ✓ |
| | GRAV | Acceleration or Gravity Load | 1 | ✓ |
| Misc | | | | |
| | ENDDATA | Marker for end of input file | ✓ | ✓ |
| | PARAM | Specifies values for parameters used in solution sequences or user written DMAP programs. | ✓ | 1 |

1.1.1.2 Header Data

| Name | Description | Read | Write |
|--------------|--|------|----------|
| SOL | Execute a Solution Sequence | Х | ✓ |
| CEND | End of Executive Control Delimiter | X | ✓ |
| TITLE | Output Title | X | ✓ |
| ECH0 | Bulk Data Echo Request | X | ✓ |
| DISPLACEMENT | Displacement Output Request | X | ✓ |
| SPCFORCES | Single-Point Forces of Constraint Output Request | X | ✓ |
| STRESS | Element Stress Output Request | X | ✓ |
| LOAD | External Static Load Set Selection | X | ✓ |
| SUBTITLE | Output Subtitle | X | ✓ |
| SUBCASE | Subcase Delimiter | X | ✓ |
| BEGIN BULK | Case Control and Bulk Data Delimiter | X | ✓ |

 $^{^{1}}$ Twisting CBEAM cross section by using the BIT flag is not supported. Offset via OFFT is only supported for the same offset at A and B end of beam.

1.2 DNV GL Seasam Input Interface File (FEM)

1.2.1 FEM Cards supported

| | Name | Description | Read | Write | Page ² |

1.2.2 Element Types in SESAM

Conventions for use of the interface file for the elements in SESAM are defined here. Other element types may be introduced for use in other programs.

The table below contains element type numbers already reserved. (Not all of them are included in SESAM).

For ADVANCE, the element types listed are those available from the SESAM preprocessors. In addition to that ADVANCE has a lot of other element types.

Table 1: List of existing Element Types

| Typ^3 | Name | N.4 | Table 1: List of existing El Description of Element | Ref. | 5 | 6 | 7 | 8 | 9 | Other ¹⁰ |

⁴Number of nodes

⁵Indcluded in program PREFRAME

⁶Included in program PREFEM

⁷Included in program SESTRA

⁸Included in program ADVANCE

⁹Included in program Poseidon

 $^{^{10}}$ FR = FRAMEWORK, LA = LAUNCH, PL = PLATEWORK, PR = PRETUBE, SP = SPLICE, WD = WADAM, WJ = WAJAC

¹¹Temporarily ADVANCE interprets Axisl Spring as link element, ignoring the material reference. The 6 matrix numbers are given in direct input to ADVANCE.

¹²The element subroutines are the same as for the subparametric curved thick shells (SCQS and SCTS).

¹³As General Spring it is just a 2-noded spring (12x12 matrix) which may be in a local coordinate system. As a shim element the preprocessor(s) will only insert stiffness in the local x- and y-direction. In the analysis program(s), shim members and general springs are treated exactly in the same manner.
