# C++ IO support for various FEM exchange file formats

## Berthold Höllmann

April 8, 2016

#### **Contents**

1	Sup	oported FEM file formats	1					
	1.1 NASTRAN Bulk Data Format (BDF)							
		1.1.1 BDF Cards supported	2					
	1.2	DNV GL Seasam Input Interface File (FEM)	3					
		1.2.1 FEM Cards supported	3					
		1.2.2 Element Types in SESAM	/					

#### 1 Supported FEM file formats

Not all functionality defined for the exchange file formats is supported. The supported subset is currently mainly defined by the functionality supported in GLFrame rspt. the BMF file format.

More detailed information on supported functionality can be found in the according directories in the doc dubdirectory.

## 1.1 NASTRAN Bulk Data Format (BDF)

### 1.1.1 BDF Cards supported

	Name	Description	Read	Write
General				
	MAT1	Material definition	$\checkmark$	$\ddot{\sim}$
	GRID	Grid nodes	$\checkmark$	$\ddot{\sim}$
Element	S			
	CTRIA3	3 node shaped shell elements	$\checkmark$	$\ddot{\sim}$
	CQUAD4	4 node shaped shell elements	✓	~
	CBEAM	Complex beams 1	$\checkmark$	$\ddot{\sim}$
	CBAR	Simple beams	$\checkmark$	·· ·· ·· ·· ·· ·· ·· ·· ·· ·· ·· ·· ··
	CROD	Trusses	$\checkmark$	$\ddot{\sim}$
	CELAS1	Scalar Spring Connection	<u></u>	$\ddot{\sim}$
Element	properties			
	PSHELL	Properties for CTRIA3, and CQUAD4	$\checkmark$	$\ddot{\sim}$
	PBEAM	Integral properties for CBEAM	$\checkmark$	$\ddot{\sim}$
	PBEAML	Properties for CBEAM describing cross section	$\checkmark$	~
	PBAR	Integral properties for CBAR	$\checkmark$	~
	PBARL	Properties for CBAR describing cross section	$\checkmark$	:( :( :( :( :(
	PROD	Properties for CROD	$\checkmark$	$\ddot{\sim}$
	PELAS	Properties for CELAS*	~	$\ddot{\sim}$
Load				
	LOAD	Load case combination	$\checkmark$	$\checkmark$
	FORCE	Forces on Nodes	$\checkmark$	$\checkmark$
	MOMENT	Moments on Nodes	$\checkmark$	$\checkmark$
Misc				
	ENDDATA	Marker for end of input file	$\checkmark$	$\checkmark$

 $<sup>^{1}</sup>$ Twisting CBEAM cross section by using the BIT flag is not supported. Offset via OFFT is only supported for the same offset at A and B end of beam.

## 1.2 DNV GL Seasam Input Interface File (FEM)

### 1.2.1 FEM Cards supported

#### 1.2.2 Element Types in SESAM

Conventions for use of the interface file for the elements in SESAM are defined here. Other element types may be introduced for use in other programs.

The table below contains element type numbers already reserved. (Not all of them are included in SESAM).

For ADVANCE, the element types listed are those available from the SESAM preprocessors. In addition to that ADVANCE has a lot of other element types.

Table 1: List of existing Element Types

<sup>&</sup>lt;sup>4</sup>Number of nodes

<sup>&</sup>lt;sup>5</sup>Indcluded in program PREFRAME

<sup>&</sup>lt;sup>6</sup>Included in program PREFEM

<sup>&</sup>lt;sup>7</sup>Included in program SESTRA

<sup>&</sup>lt;sup>8</sup>Included in program ADVANCE

<sup>&</sup>lt;sup>9</sup>Included in program Poseidon

 $<sup>^{10}</sup>$ FR = FRAMEWORK, LA = LAUNCH, PL = PLATEWORK, PR = PRETUBE, SP = SPLICE, WD = WADAM, WJ = WAJAC <sup>11</sup>Temporarily ADVANCE interprets Axisl Spring as link element, ignoring the material reference. The 6 matrix numbers are given in direct input to ADVANCE.

 $<sup>^{12}</sup>$ The element subroutines are the same as for the subparametric curved thick shells (SCQS and SCTS).

<sup>&</sup>lt;sup>13</sup>As General Spring it is just a 2-noded spring (12x12 matrix) which may be in a local coordinate system. As a shim element the preprocessor(s) will only insert stiffness in the local x- and y-direction. In the analysis program(s), shim members and general springs are treated exactly in the same manner.
